5 Critical Elements of a Perimeter Protection Strategy

A perimeter protection system should provide asset & brand protection, and safety & risk management, and should be designed based on the customer's objectives (prevent & deter, or apprehension).

But regardless of the reason for or type of the perimeter security system, special attention should be paid to these core areas:

1. **Highly Trained Personnel**
2. **Supervision & Redundancy**
3. **The Right Technology**
4. **Deterrence / Prevention**
5. **Instantaneous Response**

Bosch Tech Tip: Viewing Live Video Checks System Components

Viewing live video not only checks the actual video feed from the camera, but it also checks the following system components:

- **Operator Client Software & Hardware:** Live video validates the installation of all required software, as well as the computer's hardware capabilities to display video
- **Network Connectivity:** Live video validates network connectivity to the video device
- **PTZ Control & Privileges:** Displaying live video & controlling the cameras validates PTZ communications as well as user privileges
