Other News & Notes

Security Cameras Hacked to Enable Cyber Attack

Imperva, a cybersecurity company based in CA, recently reported an incident whereby hackers were able to overwhelm and temporarily shut down a website – by hacking into CCTV cameras the website had access to.

These CCTV cameras were Internet connected, and all were accessible using default log-in credentials. The perpetrators exploited this security lapse and loaded malware onto the CCTV cameras, which caused them to carry out denial-of-service attacks. (This caused the cameras to overwhelm a particular website with over 20,000 requests per second, causing a temporary shutdown.) The simple solution? Change the default passwords on network-connected devices.

Understanding PoE

Power over Ether (PoE) is a great benefit for any security system, but users need to be aware that not all PoE switches are created equal.

Considerations Include:

- Port Speeds (data communication speed on each port)
- Power Budget (how much power each connected device requires – be sure to consider future system expansion)
- Unmanaged vs Smart (Smart switches allow for various switching functions to be monitored and configured)
